

# Fairville Products, Inc.

Fuel Right® EP Eight-ounce bottles are a convenient way to shock-treat systems directly. EP prevents sludge buildup, breaks down old sludge, prevents corrosion of tanks and filter housings, and protects against winter freeze-ups.

Dose: one bottle per 275-300 gallon tank once or twice a year.

Fuel Right® EP Quart Bottles are for treating larger tanks or splash-treating delivery trucks.

Dose: One quart per 1000 gallons for annual shock treatment.  
One quart per 2800 gallons for bulk fuel treatment.

## Retail "Trial Packs"

Three 8-ounce bottles - \$35.00 plus \$7.00 s&h.  
Two quart bottles - \$55.00 plus \$10.00 s&h.

Fuel Right® COLD FLOW in pint bottles protects outdoor tanks during the winter months. Lowers pour point to -25°F or below. Reduces CFPP by 10°F to 25°F, depending on the fuel. Cold Flow also contains glycol ether to provide anti-freeze protection for systems with free water or deposits in them.

Dose: one 16-ounce bottle per 250 gallons for full protection. One bottle of Cold Flow is equal in protection to two bottles of most competitive "multi-purpose" additives.

Fuel Right® TREATED FILTERS are felt cartridges impregnated with the active ingredients found in Fuel Right EP. These patented filters resist sludge growth and fouling and eliminate the need for mid-season filter replacement.

**Fuel<sup>R</sup>  
Right**

Fuel Right® SUMMER DIESEL in 8-ounce bottles provides protection against fuel system and injector fouling, reduces smoking, and lubricates the injection pump for less wear and longer life.

Dose: One bottle per 100 gallons monthly during the non-freezing months.

Fuel Right® WINTER DIESEL in 8-ounce bottles combines the ingredients in Summer Diesel and in Fuel Right Cold Flow, providing all of the benefits needed for diesel engines in the cold winter months.

Dose: One bottle per 100 gallons with every winter fill.

## **BULK TREATMENT PRODUCTS (All shipped in 55-gallon steel drums)**

Fuel Right® 6000 is for injection at the rack or injection of incoming fuel while unloading. It has the same active ingredients as does Fuel Right EP, but at a lower "bulk treatment" level.

Dose: 1:6000 ratio

Fuel Right® 7500 is for splash treatment of incoming fuel, either by splashing into the transport, by pouring into the offloading line, or by pouring directly into the bulk tank. Once added, it is identical to Fuel Right 6000.

Dose: 1 gallon per nominal 7500 gallons of fuel.

Fuel Right® BULK WINTER DIESEL is identical to bottled Winter Diesel but is slightly more concentrated for convenience and economy. This is the ultimate multi-purpose additive for premium diesel fuel or heating oil during the winter months.

Dose: 1:2000 ratio
